

SUPRA VAULT

Supra Vault (SVLT) Whitepaper v4.0

Ecosystem-Aligned Capital, Yield, and Governance Framework

1. Introduction & Vision

Supra Vault is a long-term ecosystem alignment framework built on the SUPRA blockchain.

Rather than operating as a speculative token, a traditional DAO, or a single-product protocol, Supra Vault is designed as a **capital-coordinating layer** that:

- Aligns builders, contributors, and capital deployers
- Converts real ecosystem yield into sustainable rewards
- Enforces accountability through contribution-based authority
- Protects treasury capital while enabling innovation

SVLT is the coordination asset of this system — **not** a governance token in the conventional sense, and **not** an inflationary rewards instrument.

Authority follows contribution.

Yield follows real value.

Ownership follows responsibility.

2. SVLT Token Overview

SVLT is the native asset of the Supra Vault ecosystem and serves four primary roles:

1. **Economic Alignment** – Long-term commitment mechanism
2. **Access & Eligibility** – Participation in yield and ecosystem privileges
3. **Deflationary Sink** – Buyback and permanent burn target
4. **Governance Weighting** – Contribution-weighted authority (non-voting)

SVLT does **not** guarantee yield, dividends, or appreciation.

All value flows are derived from **external ecosystem activity**, not from SVLT issuance.

3. Token Allocation (Post-Graduation)

Category	Allocation	Purpose
Locked Supply (Liquidity + Stability)	30%	Locked for 6 months to demonstrate commitment and reduce volatility
Treasury	25%	Development, ecosystem deployment, listings, yield engine capital
Community / NFT Holders Fund	15%	Rewards, quests, ecosystem incentives
Future Staking Pool	10%	Reserved for vault reward mechanisms
Marketing & Partnerships	10%	Strategic collaborations and ecosystem growth
Founder / Operational Reserve	10%	Operational expenses and long-term sustainability

This structure prioritizes **capital durability and ecosystem funding** over short-term emissions.

4. Treasury Design & Capital Protection

The Supra Vault Treasury exists to **deploy capital**, not to extract it.

Core Principles

- No unilateral treasury control
- Transparent and auditable actions
- Capital deployed only for ecosystem-aligned purposes
- Progressive transition to multi-signature execution as co-ownership expands

Treasury capital may be used for:

- Ecosystem yield deployment
- Sub-project funding
- Infrastructure and tooling
- Strategic partnerships
- Listings and integrations

The treasury is **not** a passive wallet and **not** a discretionary slush fund.

5. Ecosystem Yield Engine

5.1 Overview

Supra Vault introduces a **Treasury-Backed Ecosystem Yield Engine**, designed to transform real SUPRA ecosystem yield into:

- Direct rewards for long-term SVLT stakers
- Permanent SVLT supply reduction via buyback and burn

This system avoids inflationary token emissions entirely.

5.2 Approved Yield Sources

Yield may be generated from approved SUPRA ecosystem tokens, including but not limited to:

- **SOLIDO** (validator staking yield)
- **DXLYN**
- **CASH**
- Other SUPRA-native yield instruments approved through internal governance processes

The system is **token-agnostic by design**, allowing yield sources to evolve with the ecosystem.

5.3 Eligibility Requirements

To participate in an epoch:

- A wallet must stake $\geq 1,000,000$ SVLT
- Snapshot occurs at epoch start
- Snapshot balances are locked for the duration of the epoch

This prevents short-term manipulation and rewards genuine commitment.

5.4 Treasury Commitment Mechanism

At each epoch:

- The Treasury deploys yield capital **equal to the USD value of all eligible SVLT staked**
- Capital may be distributed across one or multiple approved yield sources

- Allocation decisions consider:
 - Yield reliability
 - Risk profile
 - Ecosystem alignment

SVLT does **not** generate yield internally — it **routes external yield**.

5.5 Reward Distribution (Invariant)

All harvested yield follows a fixed rule:

- **50% → Distributed to eligible SVLT stakers**
- **50% → Used to buy back SVLT → sent to Atmos Burner Vault**

This invariant **cannot be altered** without a full framework revision.

5.6 Permanent Deflation

SVLT acquired via buyback is:

- Sent to the Atmos Burner Vault
- Permanently removed from circulation
- Publicly verifiable on-chain

There is **no reclaim mechanism**.

SVLT supply only decreases through ecosystem activity.

6. Staking & Supply Dynamics

SVLT staking is:

- Eligibility-based, not APY-advertised
- Snapshot-driven, not real-time farming
- Designed for capital stability, not mercenary yield chasing

There are:

- No guaranteed returns
- No emission schedules
- No inflation-based incentives

Supply pressure is downward by design, but value is not promised.

7. Semi-Fungible Token (SFT) Framework

To complement SVLT alignment, Supra Vault introduces a **fixed-supply Semi-Fungible Token (SFT) system**, defining **role-based participation tiers** within the ecosystem.

SFTs represent **access, responsibility, and prioritization**, not speculative instruments.

7.1 SFT Supply (Fixed)

Total SFT supply: **1,000**

- **30 Founder SFTs**
- **170 Elite SFTs**
- **800 Community SFTs**

No additional SFTs will be minted beyond this structure.

7.2 Founder Tier — 30 SFTs

Founder SFT holders represent the **highest level of alignment and responsibility**.

Founder privileges include:

- **Airdrop: 1,000,000 SVLT**
- Immediate eligibility for **ecosystem yield distributions** (e.g. SOLIDO, DXLYN, CASH) once SVLT is staked
- Ability to **propose initiatives and strategic ideas**
- **Governance voting rights** on proposals affecting ecosystem direction
- **First-priority access** to NFT airdrops, partner rewards, and ecosystem incentives

Founders act as **stewards of direction**, not passive beneficiaries.

7.3 Elite Tier — 170 SFTs

Elite SFT holders are **aligned contributors and ecosystem supporters**.

Elite privileges include:

- **Airdrop: 500,000 SVLT**
- Eligibility for ecosystem yield once staking requirements are met
- Ability to **propose initiatives to the core team**
- Proposals are **reviewed and voted on by Founder-tier members**
- **Second-priority access** to airdrops and collaboration rewards

7.4 Community Tier — 800 SFTs

Community SFT holders represent the **broader Supra Vault ecosystem**.

Community privileges include:

- **Airdrop: 10,000 SVLT**
- Access to community events, updates, and future ecosystem opportunities
- **Third-priority access** to NFT airdrops and collaboration-based benefits

7.5 Priority Rule

For **all NFT airdrops, ecosystem incentives, and collaborations**, distribution priority follows:

Founder → Elite → Community

8. Co-Owner Framework & Authority Model

8.1 Purpose

The Co-Owner Framework formalizes **real contributors into decision-makers**, without DAO theatrics.

Co-Ownership is **earned**, not voted.

8.2 Eligibility

To qualify as a Co-Owner, an individual must:

- Maintain a long-term economic commitment equivalent to **50,000,000 SVLT**
- Provide material contribution through development, growth, partnerships, or capital deployment

The Primary Developer is exempt from the economic requirement as project originator.

8.3 Authority Model

- Co-Owners are **decision participants**, not token voters

- Authority is weighted by **verified contribution and expenditure**
 - Passive ownership conveys **no governance power**
-

9. Sub-Projects & Ecosystem Expansion

Co-Owners are encouraged to build sub-projects within the Supra Vault ecosystem.

9.1 Self-Funded Sub-Projects

- Fully owned by the builder
- Co-branded while co-ownership is active
- **30–40% of net profits** flow to the Supra Vault Treasury

9.2 Treasury-Funded Sub-Projects

- Supra Vault becomes a full partner
 - Ownership and revenue splits defined upfront
 - Mandatory ecosystem branding and transparency
-

10. Safeguards, Discipline & Dispute Resolution

Safeguards

- No absolute authority
- Emergency measures exist only to protect treasury and ecosystem
- Governance weaponization is explicitly prohibited

Discipline

- Misconduct addressed through structured remediation
- Removal is a last resort

Dispute Resolution

1. Good-faith discussion
 2. Confidential mediation
 3. Binding arbitration if required
-

11. Roadmap & Evolution

Supra Vault is intentionally modular.

Future expansions may include:

- Additional yield sources
- Advanced staking logic
- Ecosystem tooling
- Risk-managed capital products
- New sub-project verticals

No value extraction without ecosystem contribution.

12. Disclaimer

Supra Vault is a community-driven ecosystem initiative.
